

Stainless Steel Longplate OZI Lock Combos

Passage Function

latch function to open/close the door using the door lever.

Triple Function Lock

Inside Snib Bolt Locking

Snib button locking function on the inside longplate that throws a separate bolt. This will keep the door securely locked while you are home, but allows snib turn exit without needing a key. The snib button engages a bolt (rather than simply freezing the outside handle).

Single handed operation

key retracts latch and deadbolt, and a second turn also retracts the privacy bolt (if engaged). No need to turn the handle.

Double Cylinder Deadbolt

Double cylinder deadbolt function to lock both sides of the door to protect your home contents while you are out, and satisfy various insurance requirements.

Select your Lever Design

Available in Berlin SS, Dublin SS, and Soho SS/PSS lever designs.

Combination sets include

OZI lock mortice case 60mm backset
OZI lock standard mortice face plate and standard striker plate satin chrome finish.
